

Appendix 1. Industry-Specific Reduction Rates

Appendix 1: Industry Specific Reduction Rates

Industry	Definition	Reduction Rate
Steel industry	It is limited to the industries of steel billet production at integrated steel mills, electric arc furnace carbon steel billet production, stainless steel billet production and steel rolling.	The annual reduction rate of GHG emissions in the target year should reach 25.2% compared to the base year.
Cement industry	Businesses engaged in the manufacturing of cement clinker.	The annual reduction rate of GHG emissions in the target year should reach 22.3% compared to the base year.
Other industries	The annual GHG emissions reduction rate should reach 42% in the target year compared to the base year.	
Remark		
1. The target year is 2030, the 119th year of the Republic of China.		
2. The base year is 2021, the 110th year of the Republic of China.
